

**20
PERCENT**

Approximately 20% of an employer's annual benefits spend is on musculoskeletal (MSK) surgical care

Companies that partner with Regenexx can save up to 70% by avoiding unnecessary elective orthopedic surgeries

FACTS AND FIGURES 2019 YTD

Over 6 Million covered lives

**More than 100 employers added in 2019 —
Equaling half a million additional covered lives**

Over 100 highly trained physicians across the country

More than 50 employers added 1/1/2020 YTD

Established Broker partnerships and TPA partnerships

Regenexx®

The Trusted Alternative to Orthopedic Surgery.

WHO WE ARE

Regenexx is the founder of Interventional Orthopedics, a medical specialty that can intervene on 70% of elective orthopedic surgeries. We are the global leader in this care platform, which helps the body heal itself using orthobiologics derived from a patient's own cells. These injection-based therapies are a fraction of the risk and cost of surgery.

WHAT WE DO

We specialize in proprietary regenerative medicine protocols to treat common orthopedic conditions such as rotator cuff tears, labrum tears, meniscus tears, ligament tears, joint replacement and spinal fusions.

Our nationwide standardized procedures and protocols are at the heart of our Standardized Care Model. This standardization ensures that patients across the globe receive the same treatment governed under the same process. Our patient outcomes registry allows us to continually monitor, expand and improve our Standardized Care Model.

Regenexx treatments are only performed by our network of musculoskeletal physicians who are specialty trained in needle guided injection protocols. Regenexx has the only Interventional Orthopedic clinic network with a full research and development laboratory that allows us to continue to innovate and provide patients with transformative orthopedic care. In addition, every Regenexx clinic has an onsite biologics laboratory to custom-process every treatment specific to each patient's condition and needs.

OUR RESEARCH

Regenexx orthobiologic procedures have been researched extensively for more than a decade. We have performed over 90,000 regenerative procedures on over 40,000 patients worldwide. We've been tracking the results of these procedures in our patient outcomes database since 2005.

WHY PARTNER WITH REGENEXX

Adding the Regenexx procedures as a benefit enhancement provides employees an option in care before considering surgery that does not otherwise exist within the insured plan. Providing a non-surgical alternative to surgery reduces the number of unnecessary and ineffective surgeries occurring within the plan. Employers who partner with Regenexx report a significant drop in the need for high-risk orthopedic surgeries, less absenteeism and an enhanced benefits package. Regenexx is the only non-surgical interventional medical specialty that can be added directly to a benefits plan at no cost to the plan sponsor.
